PRESS RELEASE

November 2017

HOTEL SECTOR MUST CUT CARBON FOOTPRINT BY 90% TO MEET 2-DEGREE CLIMATE THRESHOLD

A new report from the International Tourism Partnership (ITP) reveals that the hotel sector must reduce its carbon footprint by 90% by 2050 to play its part in keeping global warming below 2 degrees Celsius.

As COP23 (the 23rd session of the Conference of the Parties to the UN Convention on Climate Change) convenes in Bonn, Germany, to further discussions aimed at meeting the Paris Climate Agreement, ITP has revealed the huge contribution hotels must make to help curb climate change.

The Hotel Global Decarbonisation Report by Greenview, commissioned by ITP, clearly shows that in order to manage the global increase in tourism over the coming decades, the hotel industry must reduce its absolute carbon emissions by 66% by 2030 and 90% by 2050 to stay within the 2-degree threshold agreed at COP21. The report has been published to complement the launch of ITP’s Goals for 2030 which align the hotel sector’s sustainable activity with the United Nations Sustainable Development Goals (SDGs). The threshold is a quantifiable “science-based target” which forms the basis of ITP’s Goal on Carbon:

*To drive sustainable growth for the future, ITP members embrace the ambition of science-based targets* and encourage the wider industry to join their collaboration to develop carbon reductions at scale.

Announcing the report, Fran Hughes, Director of ITP, said, “These figures are significant, but we believe they are achievable. They are representative of the level of reduction the whole hotel sector needs to make in order to decouple its growth, from growth in emissions. The reductions individual companies need to make may vary, dependent on where they are located and their infrastructure. That’s why we’re encouraging hotels to develop their own science-based target.

“The technology exists today to fully decarbonise the sector. Solving the issue of climate change becomes how to accelerate the solutions which are currently available. To do so, hotel industry leaders will need to support an evolution of thought and approach to make it happen through carbon pricing and how projects are financed.

“ITP’s members support our vision and our four ITP Goals which tackle carbon, water, youth unemployment and human rights. We are supporting our members with research and best practice sharing to build their capacity to develop science-based targets. Going forward we want to explore opportunities to collaborate where we can deliver carbon reductions at scale.”

Paul Simpson, CEO & co-founder of CDP, the Carbon Disclosure Project, supported ITP’s Goal on carbon saying, “The work ITP is doing to promote science-based target setting and to support its members and the hotel industry to get involved is enormously valuable. Science
Based Targets help companies understand exactly what they need to do to help keep global temperature rise well below 2 degrees Celsius. They provide a roadmap for emissions reductions that will put the world on a sustainable, low-carbon path.

ITP’s Goals launched in September are a carefully constructed and practically achievable response to four of the core sustainability issues impacting responsible hospitality providers globally. They send a clear call to action to the wider industry about the critical importance of using the SDGs (also called the Global Goals) as a focal point to drive responsible business in hospitality.

Dr Taleb Rifai, Secretary General of the UN World Tourism Organisation (UNWTO) said, “For 25 years the hotel industry under ITP’s leadership has advanced sustainable tourism; developing tools and resources for hotels and lodgings around the world, sharing knowledge and working together for a more responsible future. ITP’s Goals are the next step to ensure continued sustainable development in our sector, setting clear aims for 2030, and bringing the hotel sector together to align with the Global Goals."

Wolfgang M. Neumann, ITP Governing Council Chair and industry thought-leader, commented, “ITP believes that the hotel industry can be a force for good and make a positive contribution to the United Nations’ Sustainable Development Goals and to the COP21 climate agreements. Our vision for 2030 is for sustainable growth and a fairer future for all. We understand that bigger impacts can be achieved faster through the industry working together at scale; for this reason we invite other hotel companies to join with us in our commitment to these four critical goals.”

Greenview’s founder, Eric Ricaurte, added, “We all share one planetary KPI: 2-degree temperature rise or less. Now translating that to each industry and company, we can shift focus toward the opportunities to decarbonise while protecting what travellers value. No other sector like tourism will play a role in literally shaping the future of our world.”

GOALS AT A GLANCE

- **YOUTH EMPLOYMENT**: Collectively impact one million young people through employability programmes by 2030, thereby doubling the industry’s current impact on youth unemployment.
- **CARBON**: Embrace science-based targets, and encourage the wider industry to join in reducing emissions at scale.
- **WATER**: Embed water stewardship programmes to reduce the number of people affected by water scarcity; also improve water-use efficiency and identify ways to address water scarcity.
- **HUMAN RIGHTS**: Raise awareness of human rights risks, embed human rights into corporate governance, and address risks arising in the labour supply chain and during hotel construction.

Visit our digital page for full details of the Goals
A Science-Based Target is one adopted by a company to reduce greenhouse gas (GHG) emissions and is considered “science-based” if it is in line with the level of decarbonisation required to keep global temperature increase below 2°C. It is based in scientific research and evidence.

YOUTH EMPLOYMENT
More than 71 million young people (aged from 15 to 24) worldwide are looking for work and 156 million young workers are living in poverty, often due to unstable, irregular jobs. Many find themselves working in difficult or dangerous conditions, often outside the boundaries of the formal economy. The hotel industry is well-equipped to offer meaningful work and career development options to young people, as it is growing at 4% each year, and currently providing around one in ten of all jobs. ITP members will collectively impact one million young people under the age of 25 through their own employability programmes by 2030. This doubles their current impact on youth employability. ITP members also encourage the uptake of the Youth Career Initiative (YCI), created by the industry to bridge the gap between youth unemployment and a poor talent pipeline for hotels to recruit. There are more than 3,000 YCI graduates to date across 14 countries, with an 85% success rate of employment or returning to education.

CARBON
Rising carbon emissions are accelerating climate change with devastating impacts on communities and biodiversity. The hotel industry already accounts for around 1% of global emissions and this is set to increase as hospitality continues to grow. The hotel industry must reduce its absolute carbon emissions by 66% by 2030 and 90% by 2050 to stay within the 2°C threshold agreed at COP21; this is a quantifiable “science-based target”. To drive sustainable growth for the future, ITP members embrace the ambition of science-based targets and encourage the wider industry to join their collaboration to develop carbon reductions at scale. ITP members also encourage the uptake of consistent reporting through the use of the Hotel Carbon Measurement Initiative (HCMI), developed in collaboration with ITP and already used by over 24,000 hotels worldwide. The initiative provides a common methodology for measuring and reporting on the carbon footprint of a hotel stay or meeting.

WATER
Demand for freshwater is likely to outstrip supply by 40% by 2030 and a third of the world’s population will be living in areas of severe water stress by this time. In many countries, water consumption per guest in hotels greatly exceeds that of the local population, so the industry has a responsibility to encourage responsible use and consumption. To improve water stewardship across the industry, ITP members commit to embedding water stewardship programmes across their hotel portfolios as a means of reducing the number of people affected by water scarcity. Members also support improved water-use efficiency, sustainable withdrawals and supply of freshwater to address water scarcity. Members encourage the uptake of the Hotel Water Measurement Initiative (HWMI), a common methodology for measuring and reporting on the water footprint of a hotel stay or meeting.

HUMAN RIGHTS
Human rights are the basic rights and freedoms that all people are entitled to. By consensus of ITP members, human rights abuses within the sector are most likely to occur in a number of key areas: the supply chain and procurement, recruitment, the hotel construction phase, and vulnerability to human trafficking activities. ITP members recognise the critical importance of having an increased focus on human rights. As such members focus on fighting modern slavery, human trafficking, and increasing awareness, transparency and remediation.

ITP members are committed to supporting the following four key goals to improve human rights in the industry:
- Continue to raise awareness of human rights risks in the hotel industry
- Embed human rights into corporate governance requirements
- Work to address human rights risks in the labour supply chain, including elimination of fees charged to workers to secure employment
- Identify ways to address human rights risks during the development and construction phase of hotels
ABOUT THE INTERNATIONAL TOURISM PARTNERSHIP

The International Tourism Partnership drives responsible business in the hospitality industry by engaging with the world’s leading hotel companies, which collectively manage 26,000 hotels. ITP’s members are Carlson Rezidor Hotel Group, Diamond Resorts International, Four Seasons Hotels and Resorts, Hilton, Hyatt, InterContinental Hotels Group, Marriott International, NH Hotel Group, Soneva, The Hongkong and Shanghai Hotels Ltd, Taj Hotels, Resorts and Palaces, Whitbread and Wyndham Hotels and Resorts.

ITP turns responsible ambition and good ideas into positive action. We do this by sharing best practice, offering practical products and programmes and facilitating collaboration in one of the world’s largest and most successful industries.

For our members we provide a non-competitive platform for leaders to share ideas, build relationships and work together on making the industry more responsible. For hoteliers around the world, however big and small, we provide access to valuable information and resources at no cost, allowing them to drive their own responsible business agendas. Most of this information is freely available on www.greenhotelier.org.

ITP is an initiative of Business in the Community. BITC is the Prince’s Responsible Business Network. Our members work together to tackle a wide range of issues that are essential to building a fairer society and a more sustainable future. We are a business-led, issue focused charity with more than 30 years’ experience of mobilising business. We engage thousands of businesses through our programmes driven by our core membership of over 800 organisations from small enterprises to global corporations.

For more information on ITP and our programmes visit http://tourismpartnership.org/
